

At Hipping Hall, we want the standard of our wines to reflect the standard of our food. This is why we put a great deal of effort into sourcing the best possible wines available and provide them to you, our customers at the best possible prices. The majority of the wines we offer are hand crafted from small vineyards, by small artisan producers, who often create as little as two to three thousand bottles per year. As a result, they are not available at supermarkets or large multiple wine merchants. These producers are typically involved in all stages of wine production, working in the vineyard as well as the winery to make sure the quality and identity of the wines reflect the true nature of the region from which they originate.

Many of our producers make their wines as naturally as possible using the minimal possible intervention at all stages of production. This invariably means no pesticides or herbicides in the vineyard, fermentation using wild yeasts from the grape skins (rather than laboratory cultures) and a minimum of sulphur dioxide. They literally let the wine make itself.

Of course, making wines naturally is not a new thing. It is modern science that has allowed wine makers to control the production process and create flavours that he or she felt the market wanted, but ultimately wines which are not true to themselves. The crunch point for me, was learning that the tropical fruit flavours we've all come to associate with New Zealand Sauvignon Blanc doesn't come from the grapes, but a specific yeast used to ferment the wine.

The majority of the wines on our list are either organic (Org) or biodynamic (Bio) which in wine making circles is often referred to as 'supercharged organic'. Some are marked as (TV) meaning 'Terra Vitis', although not organic, these vineyards use as little intervention as they can. To sum up the theory of biodynamic viticulture in a paragraph is tricky. Condensed down, the art of biodynamic farming is a proactive attempt to bring life to the soil by the addition of natural composts and organic preparations and by considering the vineyard in its entirety as a living self-sustaining system. Planting, pruning, the application of preparations and the harvest are all done in harmony with the lunar cycle. When you walk through a biodynamic vineyard, the difference is self-evident. Wild flowers grow amongst the vines, while other tree and plant species as well as fauna are in abundance. The vineyard is alive!

After extolling the virtues of natural wine production I'm sure you'll want to try some to see for yourself! A good starting point would be the Rioja Blanco Moraza for a white or the Cuvee des Galets Estezargues for a drop of red. If you feel like splashing out, then I try the Vieux Clos from the world famous Nicolas Joly in the Loire or perhaps a bottle of Chateau Le Puy, legendary Biodynamic producer in Bordeaux.

If you would like to learn more about these exciting wines then I can highly recommend Isabelle Legeron's book, an introduction to organic and biodynamic wines made naturally. Alternatively, why not pop into our lovely wine supplier, Buon Vino. They have a great shop at the Courtyard on the main road just outside of Settle.

We do hope you enjoy having a browse through our wine list and please don't be afraid to ask for recommendations or advice when choosing a wine to go with your meal. We have matched wines with each course of the menu, either as a wine package to go with the tasting menu or as individual glasses to go with the a la carte. We really hope you enjoy our selections. Cin cin!
